Kevin P. Verratti, Director of Technology

Technology School Board Report
8/15//2017

- Comcast has completed the work to install fiber between WLCS and FRES as well as the 300mbps Fiber connection to the internet. After some minor configuration changes to our network independent testing shows, connection speeds of 300mbps upload and 300mbps download.
- TDS has completed the fiber install for the 100mbps connection to the internet at SAU offices and LCS. Independent testing shows connections speeds of 100mbps upload and 100bps download.
- Shortel has completed installation and testing of T1s for phone services at all three buildings. An issue with porting over existing phone numbers slowed the process until this could be resolved. Main phone lines for each location will remain the same but staff who use Direct Inward Dialing (DIDs) will receive a new number. The four digit staff extensions will remain unchanged.
- Chromebooks have been configured, labeled, inventoried and are ready for students and the start of the school year. This will be the first year with a full 1:1 deployment of laptops for grades 3-12. Students, staff and the community should be proud of accomplishing this and realize what an incredible resource this is to us.
- Approximately 100 devices that no longer met the educational or business needs of the district were recycled in an environmentally friendly manner. These devices ranged from 11-year-old computers to 15" LCD panels to broken printers and projectors. This was done at no cost to the district.
- All classroom computers have had their software updated and are ready for the first day of school.

Respectfully,

Kevin P. Verratti
Director of Technology
